## **Guidelines for your estuary field study:**

**Use your senses** – sight, smell, touch, hearing, but no tasting unless a qualified guide has approved the plant you want to taste.

**Observe carefully** – objective study is a foundation of scientific inquiry and is a skill that must be developed.

**Slow down and work quietly** – you will see, hear, and experience much more if you do.

**Follow your teacher's instructions** – they are designed for your safety and to help you get the most out of the experience.

**Respect the site** – please leave the plants, animals, and non-living parts of study site as you found them so that others may enjoy this special place.

**Leave No Trace** – take what you have brought with you including all garbage, recyclables, and compost.

**Enjoy and Explore** – Estuaries are unique places with much to offer those who work to understand them.
